Cognitive Orientation to daily Occupational Performance - Learn the CO-OP Approach

Presented by Dr Elspeth Froude & Professor Sylvia Rodger
Friday 23rd & Saturday 24th May 2014

Workshop Overview:

This CPD workshop is aimed at attendees from new graduate to advanced Occupational Therapists and Physiotherapists.

Cognitive Orientation to daily Occupational Performance (CO-OP) is a therapeutic intervention approach for people who have difficulties performing motor based skills. CO-OP was designed in Canada and is now the world’s leading intervention approach for children with Developmental Coordination Disorder (DCD) and evidence is emerging for cerebral palsy, stroke and Autism Spectrum Disorder (ASD).

This 2-day workshop, participants will:

1. Understand the theories that underpin the CO-OP Approach
2. Be able to apply the process of problem solving, dynamic performance analysis, guided discovery and strategy used in implementing the approach.
